Of the 17,176 genes including the cDNAs of the present  
 invention, genes, whose expression levels were high enough to  
 detect in each library of HELAC, HHDPC, HLUNG, HSYRA, IMR32,  
 JCMLC, and KIDNE, were analyzed for the expression frequencies.  
 20 The analysis results are described below. Each is a relative  
 value, where the expression level over all tissues is taken as  
 100. The larger this value, the greater the level of expression.

Table 32

Of the 17,176 genes that include the cDNAs of the present  
 invention, genes whose expression levels were high enough to  
 30 detect in each of the LIVER, LYMPB, MAMGL, MESAN, MESTC, N1ESE,  
 and NB9N4 libraries were analyzed for expression frequency. The  
 analysis results are described below. Each is a relative value,  
 where the expression level over all tissues is taken as 100.  
 The larger this value, the greater the level of expression.

35

Of the 17,176 genes that include the cDNAs of the present  
 5 invention, genes whose expression levels were high enough to  
 detect in each of the NCRRM, NCRRP, NESOP, NETRP, NHNPC, and  
 NOVAR libraries were analyzed for expression frequency. The  
 analysis results are described below. Each is a relative value,  
 where the expression level over all tissues is taken as 100.  
 10 The larger this value, the greater the level of expression.

Table 34
